

Talento EFT Terminal, form follows function.

Talento EFT Terminal

A streamlined transaction flow—

Talento's intuitive transaction flow is a product of Dassault's worldwide product offering experience. For example, the swift speed of Talento's thermal printer ensures that you never wait for printing, with the customer receipt available in approximately one half second after approval. The large backlit multi-line display, ATM-like screen addressable keys and simple to follow menus lead inexperienced operators through any transaction. Bright blue hot keys provide a merchant access to functions in a single keystroke, saving time and eliminating frustration.

Superior technology

Talento's multi-tasking application reduces merchant and operator wait time by performing transaction tasks such as pre-dialing at the swipe of the credit card and printing during transaction authorization. The retail/restaurant solution offers credit, MO/TO, debit, EBT, and check authorization all in one application. With Talento's multi-tasking technology, form follows function.

Customer and merchant security is paramount

Customers and merchants are at ease when they use Talento. The Talento offers either an integrated or handheld PIN pad that meets all domestic security standards. The big bright screen, simple keyboard, and contoured ergonomic design reduce entry errors and promote ease of use.

Features
